Scenario

Given Problem

- Given, Train state = delayed. Find updated probability distributions of other variables Rain and Maintenance. You must mathematically derive these probability distributions using the given formula.

Distribution of Rain States

Rain States		
None	Light	Heavy
0.7	0.2	0.1

Distribution of Maintenance States

Maintenance States		
Rain	Yes	No
None	0.4	0.6
Light	0.2	0.8
Heavy	0.1	0.9

Distribution of Train State – Delayed

Train State : Delayed		
Rain	Maintenance	Delayed
None	Yes	0.2
None	No	0.1
Light	Yes	0.4
Light	No	0.3
Heavy	Yes	0.6
Heavy	No	0.5

Probability Calculation of Train States

$$\begin{aligned}P(\text{None}, \text{Yes}, \text{Delayed}) &= P(\text{None})P(\text{Yes}|\text{None})P(\text{Delayed}|\text{None}, \text{Yes}) \\&= 0.7*0.4*0.2 = 0.056\end{aligned}$$

$$\begin{aligned}P(\text{None}, \text{No}, \text{Delayed}) &= P(\text{None})P(\text{No}|\text{None})P(\text{Delayed}|\text{None}, \text{No}) \\&= 0.7*0.6*0.1 = 0.042\end{aligned}$$

Probability Calculation of Train States

$$\begin{aligned}P(\textit{Light}, \textit{Yes}, \textit{Delayed}) &= P(\textit{Light})P(\textit{Yes}|\textit{Light})P(\textit{Delayed}|\textit{Light}, \textit{Yes}) \\&= 0.2*0.2*0.4 = 0.016\end{aligned}$$

$$\begin{aligned}P(\textit{Light}, \textit{No}, \textit{Delayed}) &= P(\textit{Light})P(\textit{No}|\textit{Light})P(\textit{Delayed}|\textit{Light}, \textit{No}) \\&= 0.2*0.8*0.3 = 0.048\end{aligned}$$

Probability Calculation of Train States

$$\begin{aligned}P(\text{Heavy}, \text{Yes}, \text{Delayed}) &= \\P(\text{Heavy})P(\text{Yes}|\text{Heavy})P(\text{Delayed}|\text{Heavy}, \text{Yes}) \\&= 0.1*0.1*0.6 = 0.006\end{aligned}$$

$$\begin{aligned}P(\text{Heavy}, \text{No}, \text{Delayed}) &= \\P(\text{Heavy})P(\text{No}|\text{Heavy})P(\text{Delayed}|\text{Heavy}, \text{No}) \\&= 0.1*0.9*0.5 = 0.045\end{aligned}$$

Probability Distribution of Rain State

Marginalization of Rain States, given that train = delayed

$$\begin{aligned}P(\text{None}|\text{delayed}) &= P(\text{None}, \text{Yes}|\text{delayed}) + P(\text{None}, \text{No}|\text{delayed}) \\&= .056 + .042 = .098\end{aligned}$$

$$\begin{aligned}P(\text{Light}|\text{delayed}) &= P(\text{Light}, \text{Yes}|\text{delayed}) + P(\text{Light}, \text{No}|\text{delayed}) \\&= .016 + .048 = .064\end{aligned}$$

$$\begin{aligned}P(\text{Heavy}|\text{delayed}) &= P(\text{Heavy}, \text{Yes}|\text{delayed}) + P(\text{Heavy}, \text{No}|\text{delayed}) \\&= .006 + .045 = .051\end{aligned}$$

Probability Distribution of Rain States :

$$\begin{aligned}P(\text{Rain}|\text{train} = \text{delayed}) \\&= \alpha \langle 0.098, 0.064, 0.051 \rangle \\&= \langle 0.46, 0.3005, 0.2395 \rangle\end{aligned}$$

Probability Distribution of Maintenance State

Marginalization of Maintenance States, given that train = delayed

$$\begin{aligned}P(\text{Yes}|\text{delayed}) &= \\P(\text{Yes, None}|\text{delayed}) &+ P(\text{Yes, Light}|\text{delayed}) + P(\text{Yes, Heavy}|\text{delayed}) \\&= 0.056 + 0.016 + 0.006 = .078\end{aligned}$$

$$\begin{aligned}P(\text{No}|\text{delayed}) &= \\P(\text{No, None}|\text{delayed}) &+ P(\text{No, Light}|\text{delayed}) + P(\text{No, Heavy}|\text{delayed}) = \\0.042 + 0.048 + 0.045 &= .135\end{aligned}$$

Probability Distribution of Maintenance States :

$$\begin{aligned}P(\text{Maintenance}|\text{train} = \text{delayed}) \\&= \alpha \langle .078, .135 \rangle \\&= \langle 0.3662, .6338 \rangle\end{aligned}$$

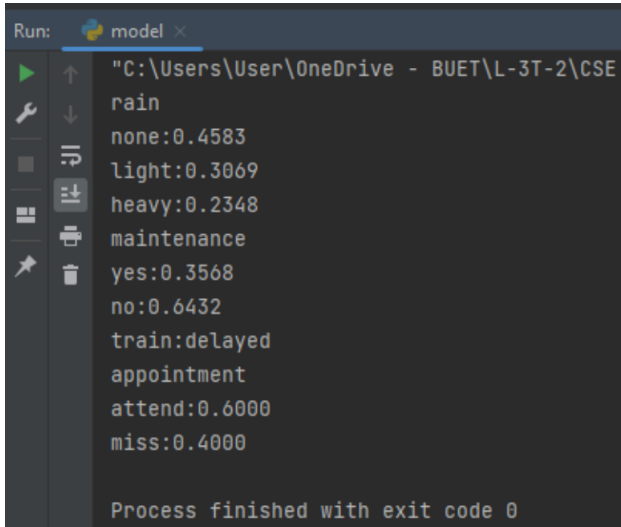

```
# Calculate probability for a given observation
probability = model.probability([["none", "no", "on time", "attend"]])

print(probability)

# Calculate predictions based on the evidence that the train was delayed
predictions = model.predict_proba({
    "train": "delayed"
})

# Print predictions for each node
for node, prediction in zip(model.states, predictions):
    if isinstance(prediction, str):
        # node on which given condition is applied
        print(f"{node.name}:{prediction}")
    else:
        print(f"{node.name}")
        for value, probability in prediction.parameters[0].items():
            print(f"{value}:{probability:.4f}")
```

Result

The screenshot shows a terminal window with a dark background. The title bar at the top reads "Run: model x". The terminal output is as follows:

```
"C:\Users\User\OneDrive - BUET\L-3T-2\CSE  
rain  
none:0.4583  
light:0.3069  
heavy:0.2348  
maintenance  
yes:0.3568  
no:0.6432  
train:delayed  
appointment  
attend:0.6000  
miss:0.4000  
  
Process finished with exit code 0
```

On the left side of the terminal, there is a vertical toolbar with various icons for running, debugging, and viewing the code.
